

An Online Music Recommendation System Based on Annotations about Listeners' Preference and Situation

Dept. of Media Science, Graduate School of Information Science

Katsuhiko Kaji

Feature values for musical similarity calculation

- lyrics
- musical scene (**annotation**)
- situation (**annotation**)

Sequence of playlist generation

1. finding base playlist (*collaborative filtering*)
2. improving to match listener preference (*transcoding*)
3. updating user preference by feedback and user's listening history (*interaction*)
